Education

University of British Columbia

BA in Computer Science and Economics

Dec 2026

Vancouver, BC

- **GPA:** 89.3% (4.3/4.33 scale)
- **Awards:** Dean's List, Chung Family Scholarship in Arts, Walter H. Gage & Elsie M. Harvey Scholarship
- **Activities:** Exchange student at **Tsinghua University** with full-ride CLIC Scholarship

Experience

Quantitative Research Assistant

UBC Sauder School of Business

Vancouver, BC

Aug 2025 – Present

- Developed NLP pipelines for large-scale Chinese CSR reports (tokenization, stopwords filtering, contextual embeddings), enabling quantitative analysis of unstructured text.
- Applied econometric techniques, including heteroskedasticity-robust regressions and instrumental variable (IV) models, to evaluate the relationship between textual patterns and nationalism.
- Collaborated with PhD researchers to design and validate empirical methods, ensuring methodological rigour in textual and econometric analysis.

Software Engineer

MDA Space

Richmond, BC

Jan 2024 – Dec 2024

- Developed software for large scale correlation and beam-forming as part of Canada's contribution to the Square Kilometer Array (SKA), a global initiative to build the world's next-largest telescope array.
- Achieved a 100% increase in hardware utilization efficiency by optimizing the system initialization algorithm to enable parallelization of FPGA usage.
- Overhauled the master and control system to enable multi-threaded commands to the signal chain, enhancing processing speed and integrating critical client-required features.
- Facilitated the onboarding of new team members and provided ongoing support to the team, ensuring effective collaboration and timely resolution of technical challenges.

Full-stack Developer Co-op

Tetra Tech

Vancouver, BC

Aug 2023 – Dec 2023

- Refactored the Flask backend of FusionMap, a B2B web-based GIS application, to an optimized Express framework, resulting in a 200% improvement in API response speed and enhancing maintainability.
- Contributed to implementing object detection on satellite imagery using PyTorch and YOLOv8, enhancing the accuracy of geospatial feature identification and optimizing analysis workflows.
- Initiated and maintained a comprehensive end-to-end test suite using Mocha and Chai, ensuring thorough and reliable testing coverage.

Teaching Assistant

UBC Department of Computer Science

Vancouver, BC

Sept 2022 – Aug 2023

- Taught systematic program design skills, including search algorithms, graph theory, and recursion.
- Led weekly lab sessions and hosted office hours to support students' understanding of course material and provide individualized assistance.

Projects

Sentiment Enhanced Multivariate Forecaster for Stock Volatility

- Built an LSTM-based multivariate forecaster for stock volatility, incorporating sentiment features extracted from financial news headlines using Word2Vec and FinBERT.

Hue: More Colors for Google Calendar

[Github](#) 

- Developed and published a featured Chrome extension to enhance Google Calendar functionality, with over 8,000 active users.
